

# Paver Surface Treatments

## What is DURA PROTECT™ Paver Technology?

DURA PROTECT™ is a factory-integrated treatment that is applied during manufacturing and cured into the concrete matrix, so it will not wash or wear off under foot traffic. It not only enhances the color but protects the surface of the paver from fading, stains, chemical damage, and weather damage. DURA PROTECT™ even reduces efflorescence. All without extra work or extra trips to the job site for paver installers.

## DURA PROTECT™ Factory-Integrated Treatment

- Chemically bonded to become integral to pavers
- Once installation is complete, the job is done
- Applied under factory-controlled conditions for consistency
- Doesn't need re-application

## OPTIMIZED PAVERS DELIVER:

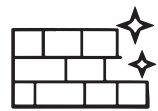

RICHER, LONGER  
LASTING COLOR

STAIN & CHEMICAL  
RESISTANCE

ALL-WEATHER  
DURABILITY

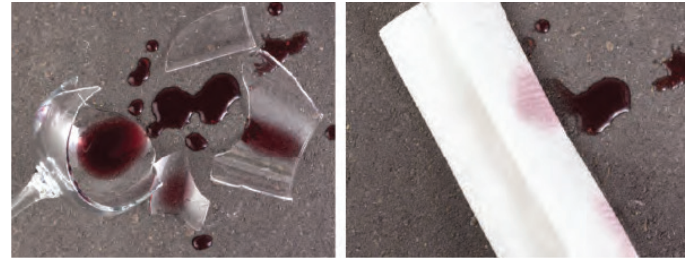

REDUCED  
EFFLORESCENCE

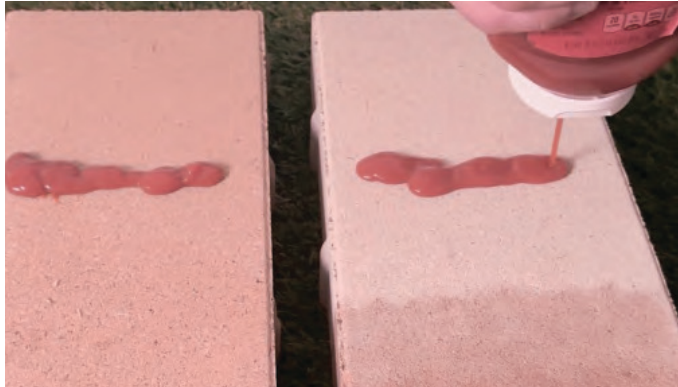

**And it all happens at the factory.  
No returning to the job site after installation.**

## DURA PROTECT™ helps prevent of stains and chemical damage

Homeowners are looking for outdoor products that minimize maintenance and maximize enjoyment. **DURA PROTECT™** protects concrete pavers from absorbing spills and dirt that become stains. Whether it is natural debris like soil and leaves or food and beverage spills from outdoor gatherings, **DURA PROTECT™** makes it easy to clean up with soapy water and a light brushing.

DURA PROTECT™ prevents spills from penetrating the surface of pavers and causing stains.

**DURA PROTECT™** treated pavers are a great choice for pool and spa decks. While untreated pavers generally perform well under normal use conditions, **DURA PROTECT™** increases paver resistance to pool chemicals in case of concentrated exposure like an accidental spill.

And don't forget- all this protection is built in during manufacturing. No extra steps or added treatments at the job site are required.

## Lasting durability in all climates

**DURA PROTECT™** adds an extra level of protection to concrete pavers to protect them from exposure to the elements. No matter the weather, **DURA PROTECT** will make your hardscapes look better and last longer.

### Hot Summer

Light-colored pavers stay cooler in warm regions but can fade and show stains over time. **DURA PROTECT™** preserves color and prevents spills from penetrating, keeping pavers bright and clean.

### Cold Winter

**DURA PROTECT™** reduces paver permeability, minimizing freeze-thaw damage and limiting salt absorption. More deicing salt stays on the surface, improving ice melting.

### OPT OUT of Efflorescence

Efflorescence is a natural but unattractive salt buildup on pavers. While harmless, it lowers visual appeal. **DURA PROTECT™** reduces water absorption, significantly minimizing efflorescence.
